

You are the owner of a Personal Computer hardware store and need to keep an inventory that can tell you what different parts or peripherals you have, how many of each you have on hand and the cost of each one. The program also allows selling a specific piece within available quantity. The program also allows you to add a new peripheral or device to the store and specify available quantity and price. Write a program that initializes the array with 100 empty records, lets you input the data concerning each tool, and enables you to list all your tools.
